

## Product line

The CNSystems product line is designed for the non-invasive real time evaluation and monitoring of hemodynamics and autoregulation. [Read more](#)

CNSystems offers products based on its core parameters:

- CNAP : continuous non-invasive arterial pressure
- CNCO : continuous non-invasive cardiac output
- CNAA : continuous non-invasive autonomic assessment

All three parameters are non-invasive and truly continuous: every heart beat's result is recorded and displayed!

Based upon these parameters, CNSystems created products to fulfill the needs of different care settings:
